Date: May 5, 2016

Subject: METRO Orange Line BRT A&E Design Services
Traffic Impact Study

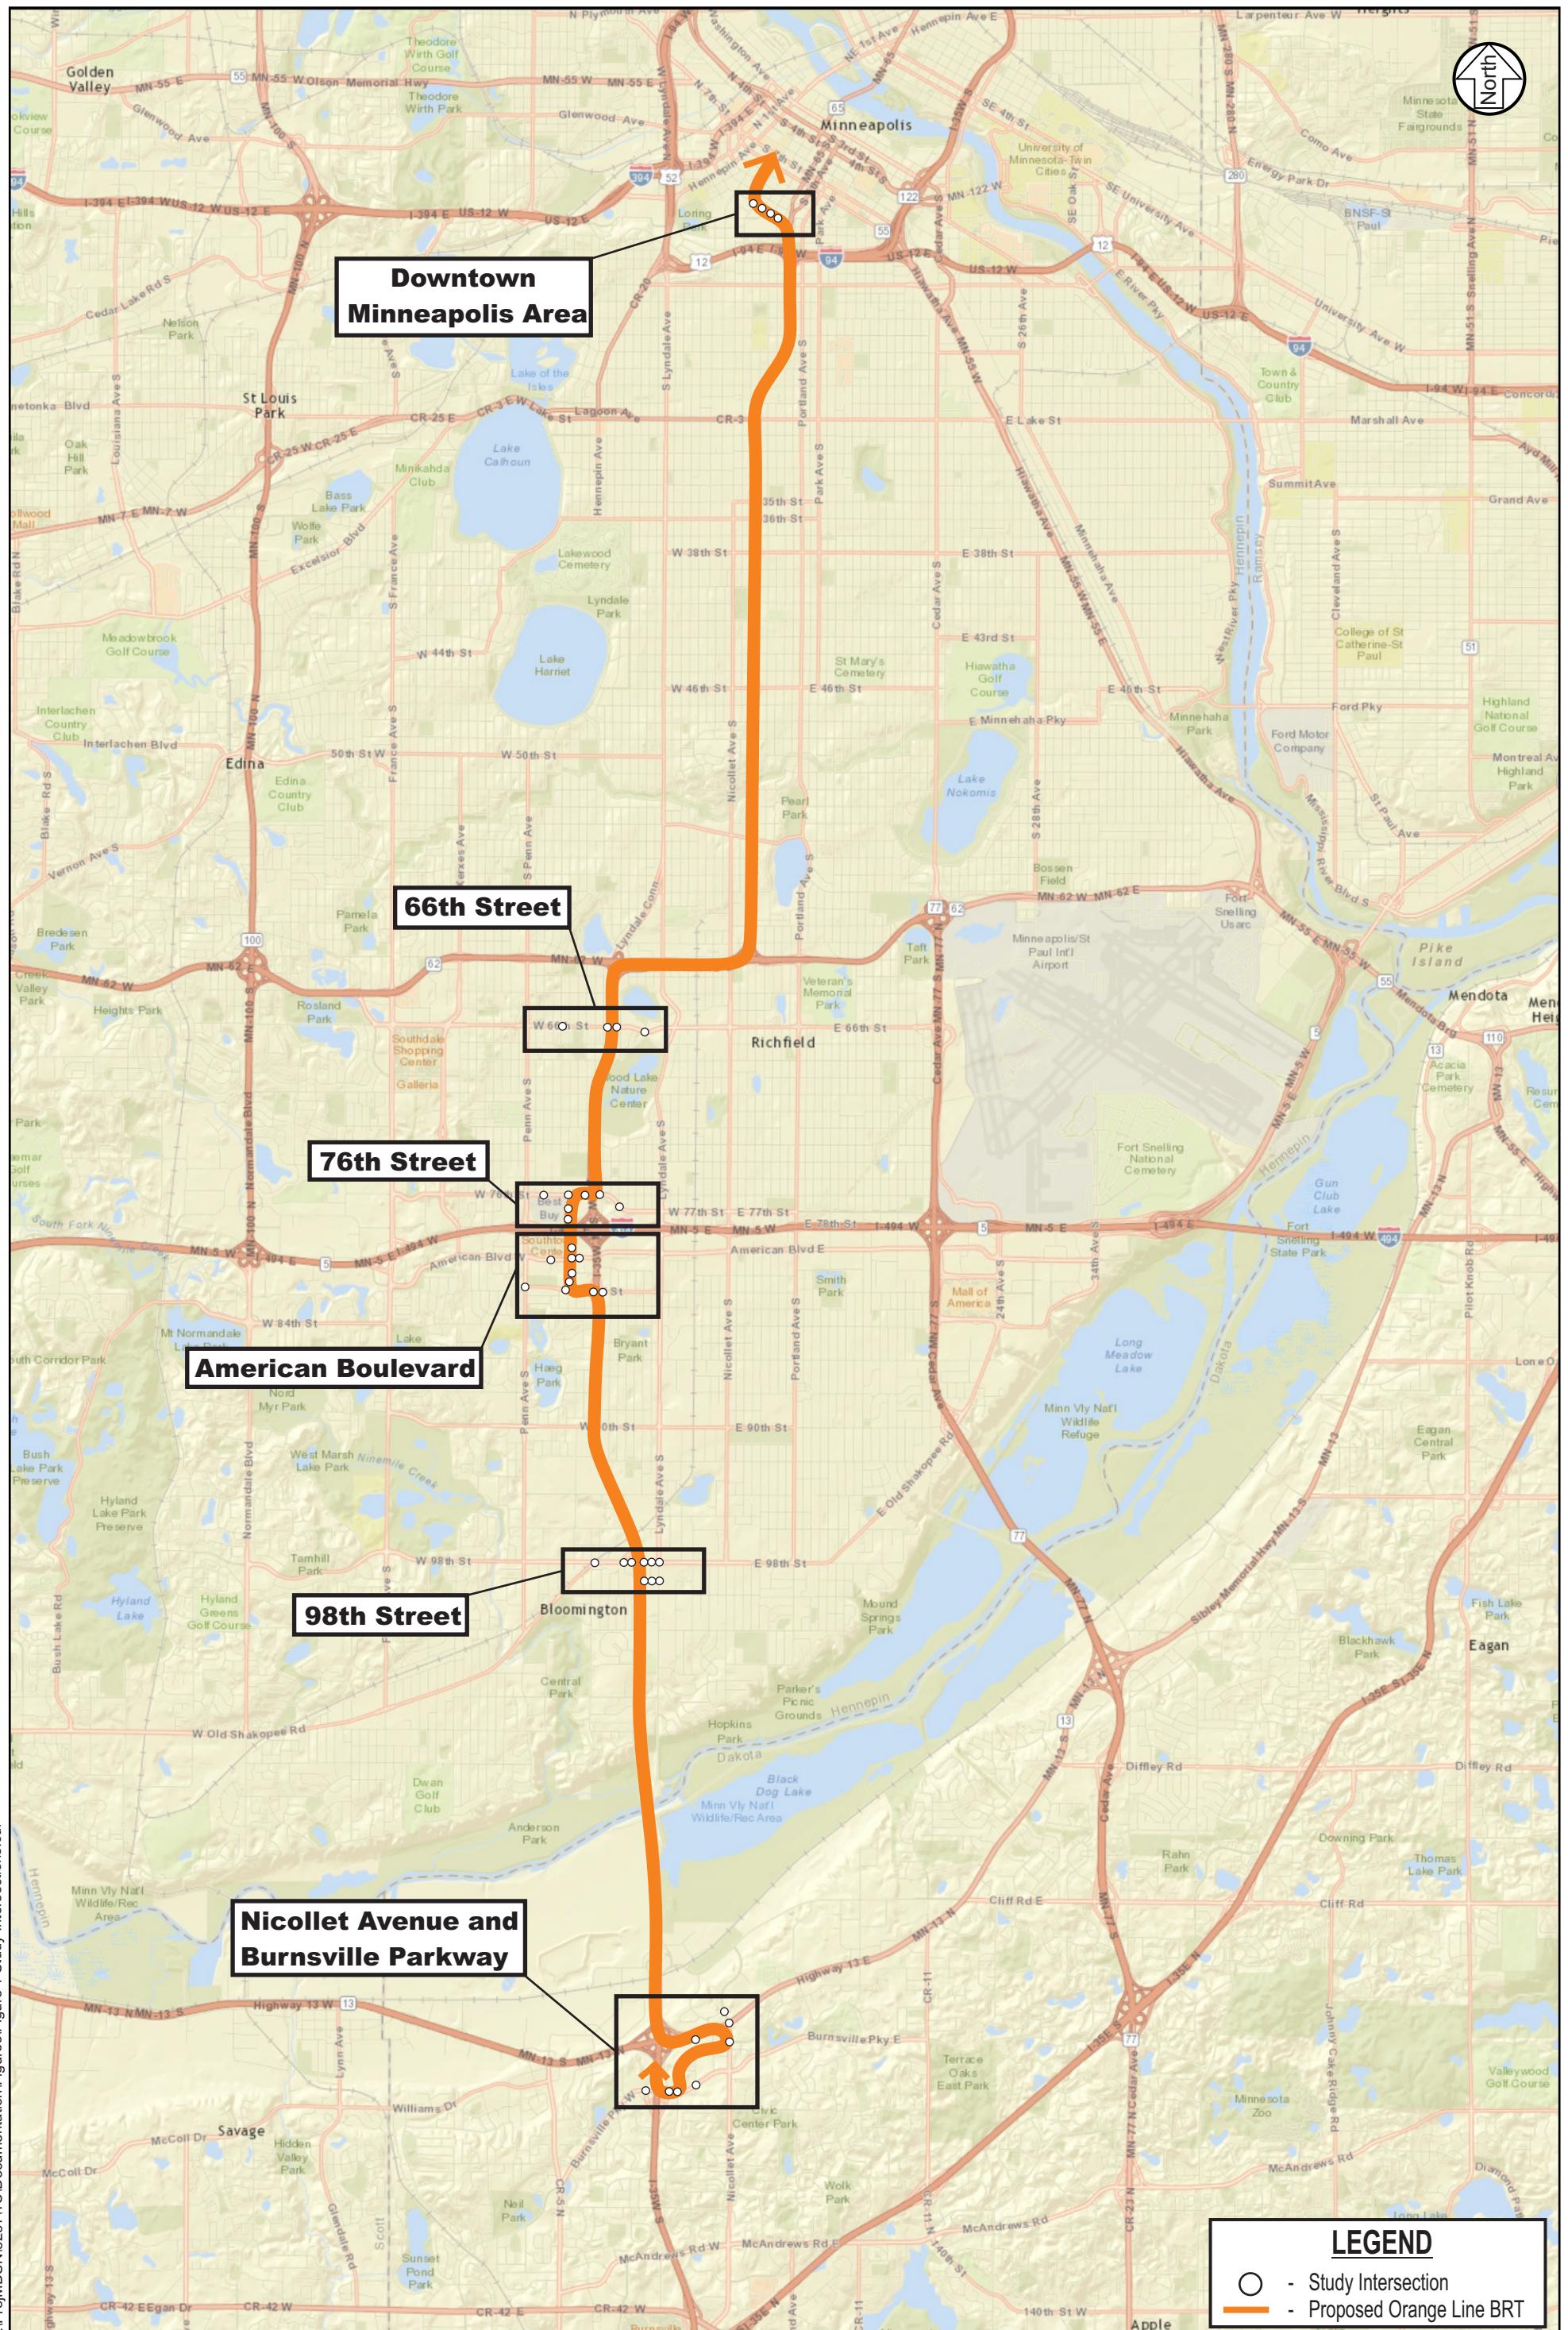

Introduction

A traffic impact study was completed for the METRO Orange Line BRT A&E Design Services to assess the potential impacts to general purpose traffic at arterial intersections as a result of implementing the Orange Line Bus Rapid Transit (BRT). The results of this study are for inclusion in the Documented Categorical Exclusion (DCE). The Orange Line BRT project follows the I-35W corridor from Burnsville to downtown Minneapolis (see Figure 1). Results from this study were used to: 1) identify and describe potential traffic and parking impacts; 2) determine whether existing intersections have adequate capacity to accommodate increased bus service and associated Park-and-Ride traffic; and 3) describe connectivity to other transportation facilities and modes.

The existing 46th Street Station does not impact arterial intersections and the future Lake Street Station impacts are being documented under a separate project, so these stations were excluded from this analysis. The Orange Line BRT stations analyzed and the jurisdictional review agencies in addition to Metro Transit are shown in Table 1.

Table 1. Jurisdictional Review Agencies by Station

Station	Jurisdictional Review Agencies
Downtown Minneapolis Area	City of Minneapolis and MnDOT
66th Street	City of Richfield, Hennepin County, and MnDOT
76th Street	City of Richfield, City of Bloomington, Hennepin County, and MnDOT
American Boulevard	City of Richfield, City of Bloomington, Hennepin County, and MnDOT
98th Street	City of Bloomington, Hennepin County, and MnDOT
Nicollet Avenue and Burnsville Pkwy	City of Burnsville, Dakota County, and MnDOT

METRO Orange Line BRT and Key Arterial Intersections

MERTO Orange Line BRT Study

Project Name: Orange Line BRT A&E Design Services
Metropolitan Council

Data Collection

Existing traffic volumes, geometry, and traffic controls within the study area are shown in Figures A-1 through A-6 attached in Attachment A.

Weekday a.m. and p.m. peak period turning movement counts were collected during February 2016 at the study intersections. Counts were not performed on days when there was anticipated snow or there was snow on the roadways. These turning movements were compared to existing Minnesota Department of Transportation (MnDOT) annual average daily traffic (AADTs) to ensure the counts collected were representative of a typical day.

Field observations were also completed to identify roadway characteristics within the study area (e.g. roadway geometry, posted speed limits, and traffic control). The roadway characteristics were used to assist with the development of the traffic operations models.

Traffic Forecasts

To support the traffic operations analysis, daily and peak hour (a.m. and p.m. peak) traffic forecasts were developed for all study intersections under the following scenarios:

- Year 2040 No Build
- Year 2040 Build
- Year 2019 (Opening Year) No Build
- Year 2019 (Opening Year) Build.

The following summarizes the daily and peak hour traffic forecast methodology.

Year 2040 Daily Forecasts

Daily traffic forecasts were estimated based on published existing AADTs, previous traffic forecasting studies, Thrive MSP 2040 socioeconomic assumptions, and engineering judgment. No detailed travel demand modeling was completed for this study. Below is a list of sources referenced and the corresponding station area:

- Orange Line Downtown Connection Study (2015) – Downtown Minneapolis Area
- 66th street Corridor Study (2013) – 66th Street Station
- I-494/TH 62 Congestion Relief Study and Travel Demand Model (2015) – 76th Street, American Boulevard, and 98th Street Stations
- Dakota County Travel Demand Model/Comprehensive Plan (2009) – Nicollet Avenue and Burnsville Parkway.

Adjustments were made to account for differences in analysis forecast horizons, and updated 2040 socioeconomic assumptions as of March 2016. Traffic forecasts from the Hennepin County TSP, Richfield and Bloomington Comprehensive Plans were reviewed, but not used since these forecasts

were either less refined, or inconsistent with current year 2040 socioeconomic forecasts. The year 2040 daily traffic forecasts estimated from these sources were reviewed for reasonableness by comparing traffic growth rates to TAZ level socioeconomic growth in each station area and roadway segment traveled.

Year 2040 and Year 2019 Peak Hour Turning Movement Forecasts

Peak hour turning movement forecasts were developed based on daily traffic forecasts and existing year 2016 turning movement counts. The turning movement forecasts were derived using the NCHRP 255 iterative process, which consists of the following steps:

- Daily forecasts were converted to directional approach volumes based on existing peak hour percentages and directional distribution.
- Intersection inflows and outflows were balanced and existing turning movements were adjusted to match the approach forecasts.
- A statistical review process was implemented as a reasonableness check on the forecast turning movements. This included an analysis of peak hour percentages, directional distribution by movement, previously published forecasts, and magnitude of growth. Existing peak hour percentages were maintained.
- Intersection turning movements were balanced with adjacent intersections for use in the operations analysis. Additional quality control checks were applied to review intersections with large volume imbalances.

Year 2040 Park-and-Ride trips were generated, distributed and added to the year 2040 No Build turning movement forecasts to develop year 2040 Build turning movement forecasts. The following is a summary of the Park-and-Ride assumptions:

- Capacity reduction at the existing Knox Avenue Park-and-Ride.
- No Park-and-Ride will be constructed at American Boulevard.
- No Park-and-Ride capacity increase at South Bloomington Transit Center.
- With the implementation of the Orange Line BRT there will be an increase in demand of 300 spaces at the existing Nicollet Park-and-Ride.

Year 2019 No Build turning movements were estimated utilizing linear interpolation between year 2040 peak hour forecasts and existing year 2016 turning movements. Year 2019 Park-and-Ride trip generation was added to the year 2019 No Build traffic volumes to develop year 2019 Build turning movement forecasts.

The year 2019 peak hour turning movement forecasts are shown in Figures A-13 through A-18 in Attachment A. The year 2040 peak hour turning movement forecasts are shown in Figures A-7 through A-12 also in Attachment A.

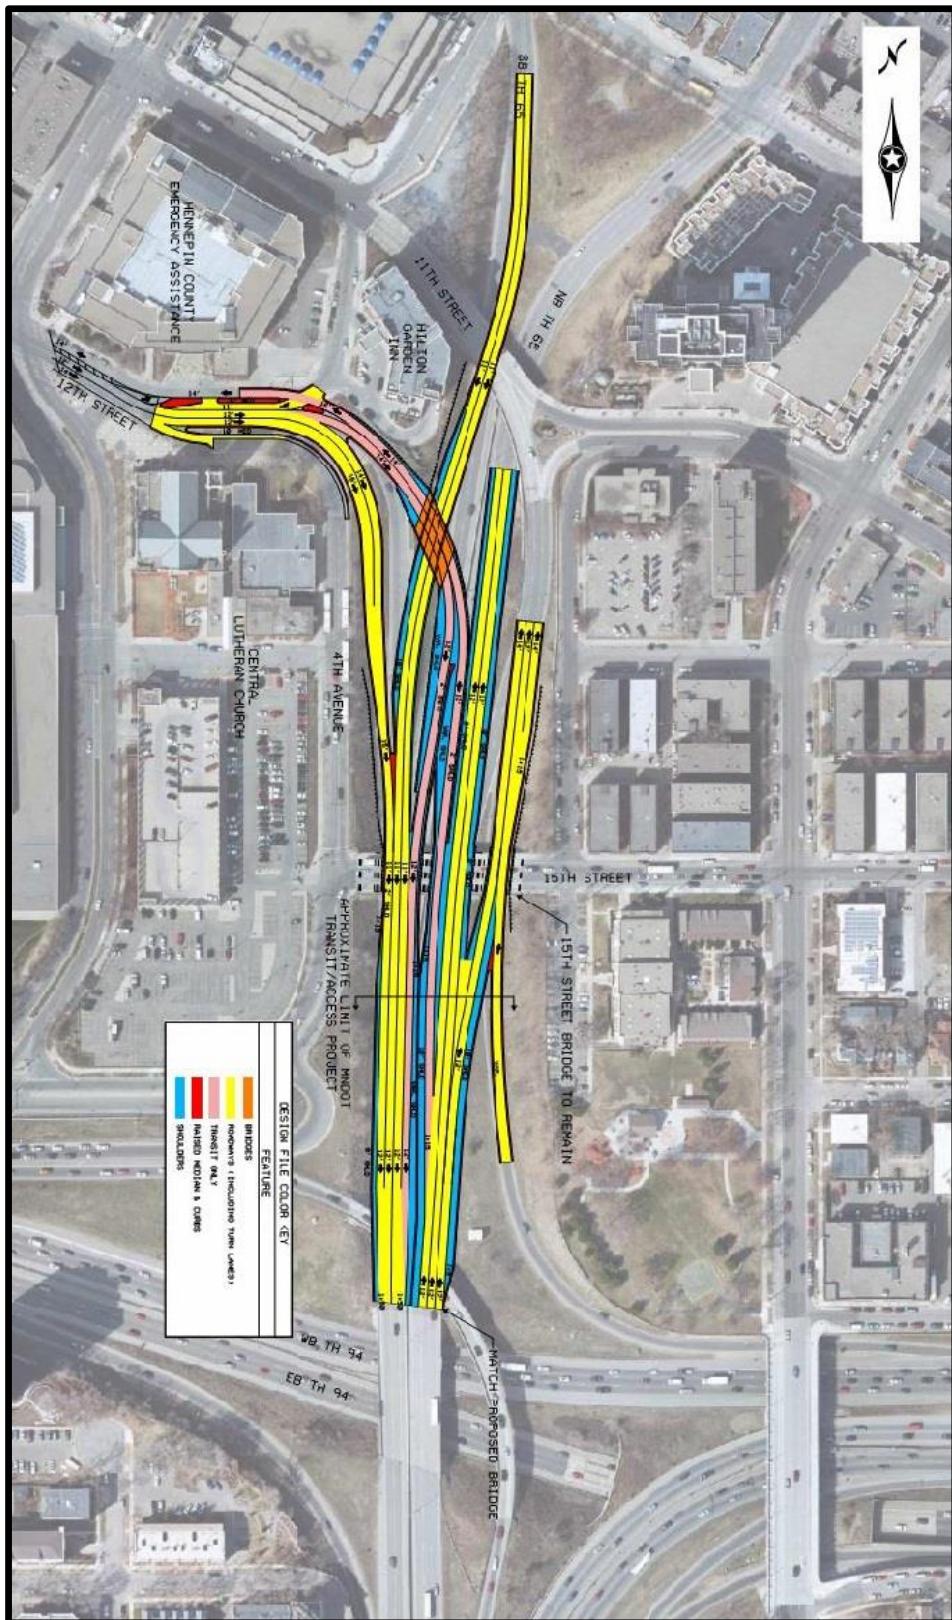

Geometric Alternatives

Various geometric improvements were evaluated to provide a connection between I-35W and 12th Street in Downtown Minneapolis. Ultimately, an alternative for this connection was selected, which is described below. Alternatives were also evaluated to provide a continuous Knox Avenue connection from Knox Avenue south of I-494 to Knox Avenue north of I-494. To provide this connection, a tunnel is proposed to be constructed under I-494. Two alternatives for this connection were carried forward and analyzed for traffic operations, which are described below.

Downtown Minneapolis Area Stations – 12th Street Transit Ramp

The Orange Line BRT will connect to 12th Street in downtown Minneapolis via a new transit-only ramp connecting 12th Street with I-35W (see Figure 2). This future connection will provide a dedicated bus-only connection allowing buses to access I-35W to/from the inside lane on I-35W. As part of this connection, a westbound bus-only contraflow lane will be provided on 12th Street connecting the new transit-only ramp to 2nd Avenue. The contraflow lane will require the removal of 15 on-street parking spaces.

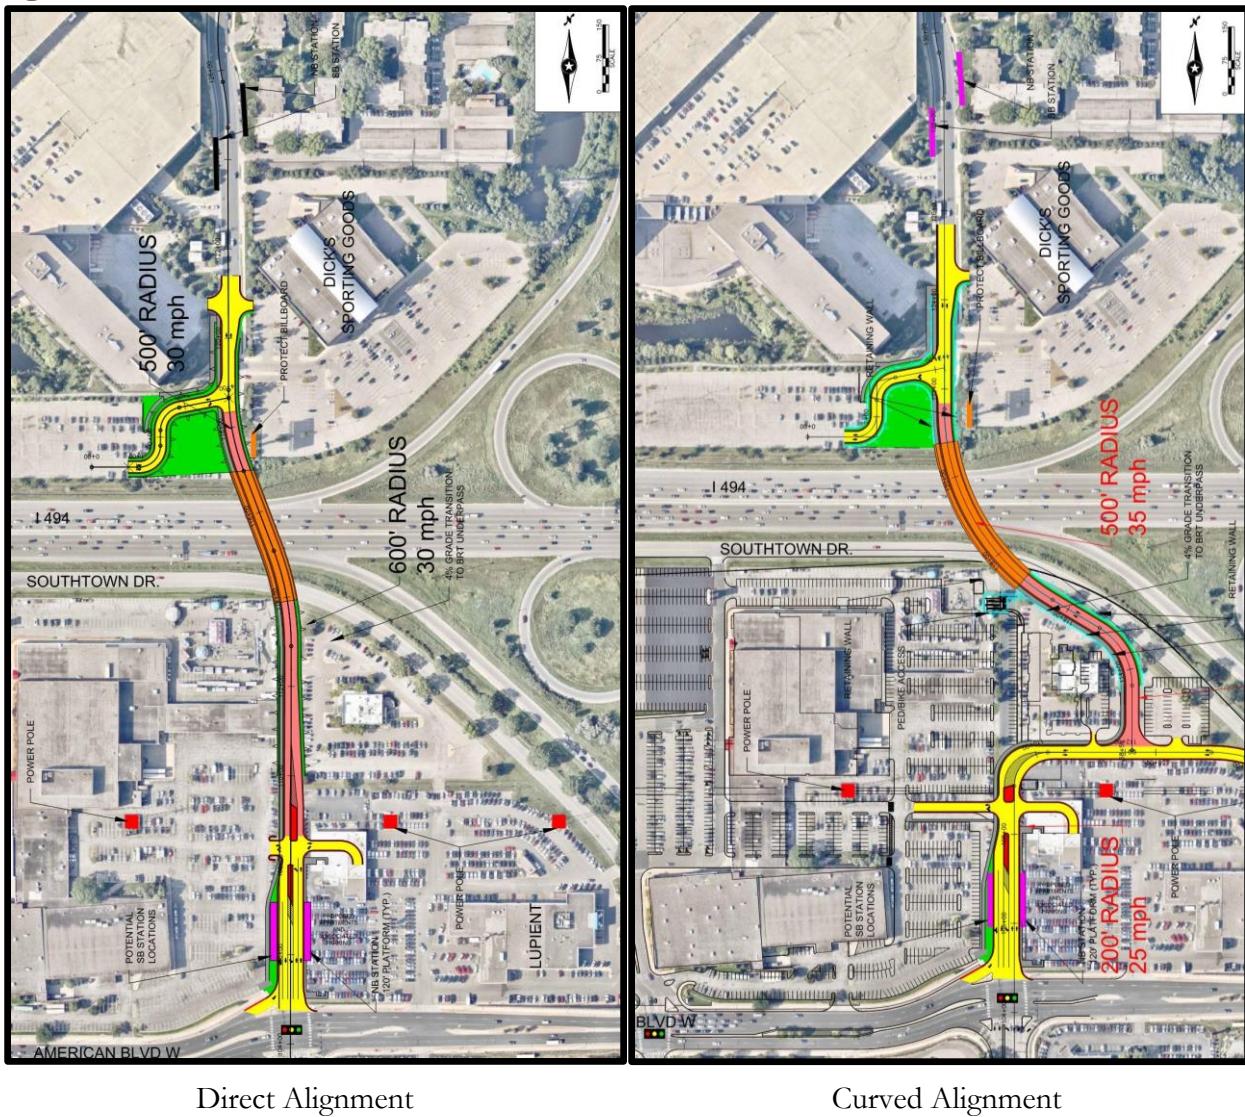

Figure 2. 12th Street Transit Ramp Connection

Knox Avenue Connection Alternatives

Two alignment alternatives were compared for the Knox Avenue connection from the 76th Street station to the American Boulevard station (see Figure 3). These connections include a transit-only tunnel under I-494 that will accommodate the future I-494/I-35W reconstruction. The first alternative is the Curved Alignment where Knox Avenue is realigned to the east and a curve is proposed to bring Knox Avenue back to the tunnel. The second Alternative is the Direct Alignment where Knox Avenue is proposed to follow its current alignment to the tunnel under I-494.

Figure 3. Knox Avenue Connection Alternatives

Traffic Analysis Methodology

The traffic operations analysis was conducted using PTV Vissim (version 8.00-05). Vissim is a multimodal traffic analysis software program capable of analyzing the interaction between transit uses, general purpose traffic, and pedestrians and bikes. Potential impacts to the transportation system from implementing the Orange Line BRT were determined by comparing Build and No Build analysis results. Specific measures of effectiveness (MOEs) used include: 1) overall average delay per vehicle by intersection; 2) overall intersection levels of service (LOS); and 3) average and maximum queues by approach.

Traffic Analysis Assumptions

The traffic analysis was completed for the a.m. and p.m. peak hours using the assumptions outlined in Table 2.

Table 2. Modeling Assumptions

Model Component	Scenario	Assumptions
Roadway Geometry	Existing/No Build	Existing roadway geometry.
	Build	Same as existing except transit-only ramp at 12th Street and realignment of Knox Avenue for transit-only tunnel under I-494.
Signal Timing	Existing	Existing signal timing.
	No Build	Optimized signal timing.
	Build	Optimized signal timing and TSP at key signalized intersections.
Transit	Existing/No Build	Existing bus routes, headways, and station locations.
	Build	Existing bus routes and headways except Route 535 replaced by Orange Line. Existing station locations and addition of BRT stations.
Orange Line	Build	10-minute headways in a.m. and p.m. peak hours.

Transit Signal Priority

Transit Signal Priority (TSP) was included in the analysis to determine the potential benefit for transit vehicles and the potential impacts it could have to general-purpose traffic. The transit advantage was determined by comparing the change in average delay by movement per BRT bus at locations where TSP is recommended.

A slack-time analysis was performed to determine the locations where there is slack-time that TSP could take advantage of. In addition to the slack-time analysis, the volume to capacity ratio (v/c) for the intersections and the specific BRT movement through the intersection (i.e. left-turn, through, or right-turn) were used to develop a list of recommended intersections to implement TSP.

The following is a list of intersections and the movement that is recommended to implement TSP:

- 66th Street/I-35W Southbound Ramp – Southbound through
- 66th Street/I-35W Northbound Ramp – Northbound through
- 76th Street/I-35W Northbound Ramp – Eastbound left-turn
- American Boulevard/Knox Avenue – Northbound/Southbound through
- 82nd Street/Knox Avenue – Southbound left-turn
- 82nd Street/I-35W Northbound Ramp – Northbound left-turn
- 98th Street/I-35W Southbound Ramp – Southbound left-turn
- 98th Street/I-35W Northbound Ramp – Northbound through/left-turn
- Burnsville Parkway/I-35W NB Ramp – Southbound through.

TSP is not recommended to be implemented at the Downtown Minneapolis signals since the BRT will operate in a dedicated bus lane, so there would be a minimal transit advantage. TSP is also not recommended to be installed for any right-turn movements. Besides the downtown Minneapolis signal, TSP is recommended for all BRT left-turns and through movements with the exception of the westbound left-turn at 76th Street/Knox Avenue and the eastbound through at 98th Street/I-35W. It is not recommended to implement TSP for the westbound left-turn at 76th Street/Knox Avenue since there is a permissive westbound left-turn phase that is over 75 seconds in the a.m. and p.m. peak hours. It is not recommended to implement TSP for the eastbound through at 98th Street/I-35W Northbound Ramp since both the northbound and southbound BRT will be a northbound movement at this intersection, and implementing TSP on the northbound approach has a greater travel time savings advantage for the BRT.

The reduction for each signal phase for TSP was calculated as the minimum of either the slack time or 1/3 the existing split. This can be modified in the future if it is determined the impact to general purpose traffic is greater than expected.

Traffic Analysis Results

The results of the traffic analysis are summarized below. The results are separated based on the location and jurisdiction of the Orange Line BRT stations. The five include:

- Downtown Minneapolis Area Stations
- 66th Street Stations
- 76th Street and American Boulevard Stations
- 98th Avenue Stations
- Nicollet Avenue and Burnsville Parkway Stations.

Downtown Minneapolis Area Stations

The results of the operations analysis for the Downtown Minneapolis Area Stations are shown in Tables 3 and 4.

Table 3. AM Downtown Minneapolis Area Stations Intersection Results

Intersection	Existing		2019 No Build		2019 12th Street Transit Ramp		2040 No Build		2040 12th Street Transit Ramp	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
South 12th Street and Marquette Avenue South	19	B	19	B	20	C	19	B	20	C
South 12th Street and 2nd Avenue South	15	B	15	B	15	B	16	B	15	B
South 12th Street and 3rd Avenue South	16	B	16	B	18	B	17	B	19	B
South 12th Street and 4th Avenue South	1	A	1	A	1	A	1	A	1	A

Table 4. PM Downtown Minneapolis Area Station Intersection Results

Intersection	Existing		2019 No Build		2019 12th Street Transit Ramp		2040 No Build		2040 12th Street Transit Ramp	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
South 12th Street and Marquette Avenue South	23	C	23	C	23	C	24	C	23	C
South 12th Street and 2nd Avenue South	20	C	21	C	22	C	22	C	24	C
South 12th Street and 3rd Avenue South	19	B	19	B	19	B	19	B	20	C
South 12th Street and 4th Avenue South	1	A	1	A	1	A	1	A	1	A

The results of the operations analysis indicate that all study intersections in Downtown Minneapolis are currently operating acceptably, with a LOS C or better in the a.m. and p.m. peak hours. All the study intersections are expected to continue to operate acceptably in year 2019 and year 2040, both with and without the implementation of the Orange Line BRT. The increase in delay in the build scenarios is negligible (<5 seconds) and the LOS is still C or better at all intersections, which is considered acceptable. No major degradations in intersection approach queues are expected with the implementation of the Orange Line BRT.

66th Street Stations

The results of the operations analysis for the 66th Street Stations are shown in Tables 5 and 6.

Table 5. AM 66th Street Station Intersection Results

Intersection	Existing		2019 No Build		2019 Build		2019 Build with TSP		2040 No Build		2040 Build		2040 Build with TSP	
	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS

West 66th Street and I-35W SB Ramps	16	B	16	B	17	B	15	B	28	C	22	C	22	C
West 66th Street and I-35W NB Ramps	12	B	11	B	11	B	12	B	13	B	14	B	15	B
West 66th Street and Lake Shore Drive South	16	B	16	B	16	B	16	B	17	B	17	B	17	B

Table 6. PM 66th Street Station Intersection Results

Intersection	Existing		2019 No Build		2019 Build		2019 Build with TSP		2040 No Build		2040 Build		2040 Build with TSP	
	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS	Delay (s/veh)	LOS
West 66th Street and Logan Avenue South	4	A	4	A	4	A	4	A	5	A	5	A	5	A
West 66th Street and I-35W SB Ramps	14	B	14	B	14	B	14	B	17	B	17	B	17	B
West 66th Street and I-35W NB Ramps	11	B	11	B	11	B	12	B	13	B	14	B	14	B
West 66th Street and Lake Shore Drive South	14	B	14	B	14	B	15	B	15	B	15	B	15	B

The results of the operations analysis indicate that all study intersections along 66th Street are currently operating acceptably, with LOS B or better in the a.m. and p.m. peak hours. All the study intersections are expected to continue to operate acceptably in year 2019 and year 2040, both with and without the implementation of the Orange Line BRT. The increase in delay in the build scenarios is negligible (<5 seconds) and the LOS is still C or better, which is considered acceptable. The results also indicate that TSP can be implemented at the two 66th Street/I-35W Ramp intersections without significantly impacting general purpose traffic. No major degradations in intersection approach queues are expected with the implementation of the Orange Line BRT.

Even though the 66th Street/I-35W Southbound Ramp intersection is expected to operate acceptably, it is recommended to restripe the southbound approach from a left-turn lane and shared through/right-turn lane to a shared left-turn/through lane and right-turn lane. This will allow the southbound right to make a right-turn on red (RTOR) without possibly being restricted from a through vehicle. This will also provide better alignment with the receiving lane for through vehicles. The change is expected reduce the delay for both general purpose traffic and the BRT.

76th Street and American Boulevard Stations

The results for these two areas are reported as one since the transit-only tunnel under I-494 will provide a continuous connection for the Orange Line BRT from 76th Street to American Boulevard along Knox Avenue. The results of the operations analysis for the 76th Street Stations are shown in Tables 7 and 8, and the results for the American Boulevard Stations are shown in Tables 9 and 10. The results shown in Tables 7 through 10 are for the Direct Alignment for Knox Avenue.

Table 7. AM 76th Street Station Intersection Results

West 82nd Street and I-35W SB Ramps	7	A	7	A	7	A	7	A	10	B	10	B	11	B
West 82nd Street and I-35W NB Ramps	10	A	10	B	10	B	10	B	17	B	17	B	18	B

The results of the operations analysis indicate that all study intersections along 76th Street, Knox Avenue, American Boulevard, and 82nd Street are currently operating acceptably, with LOS D or better in the a.m. and p.m. peak hours. All study intersections are expected to continue to operate acceptably in year 2019, both with and without the implementation of the Orange Line BRT. By year 2040, the Knox Avenue/Best Buy Parking Ramp and Knox Avenue/Southpoint Office intersections are expected to be failing without the implementation of the Orange Line BRT due to the background growth in the a.m. and p.m. hours, respectively. The implementation of the Orange Line BRT is not expected to greatly impact the Knox Avenue/Best Buy Parking Ramp intersection.

With the implementation of the Orange Line BRT with TSP, the Knox Avenue/Southpoint Office intersection is expected to worsen from LOS E to LOS F. This intersection is a side-street stop controlled intersection with a high demand on the westbound approach, which is the stopped approach, and the LOS only decreases to LOS F with TSP. If in the future this intersection operates poorly and it is determined that it is caused from TSP, the TSP parameters can be modified to reduce the priority given to the BRT.

Other than the Knox Avenue/Southpoint Office intersection, the results indicate that TSP can be implemented at 76th Street/I-35W Northbound Ramp, American Boulevard/Knox Avenue, 82nd Avenue/Knox Avenue, and 82nd Avenue/I-35W Northbound Ramp intersections in these two areas without significantly impacting general purpose traffic.

No major degradations in intersection approach queues are expected with the implementation of the Orange Line BRT.

Knox Avenue Alignment Alternative Evaluation

A comparison between the operations for the Curved Alignment and Direct Alignment was completed to determine if one is expected to provide more efficient operations or a transit advantage. The two intersections along Knox Avenue to the north of I-494 and the two intersections along Knox Avenue to the south of I-494 were included in the comparison since these are the intersections that the alignment alternatives would have the greatest impact on. The results of the comparison are shown in Tables 11 and 12.

Table 11. Knox Avenue Connection – AM Alternative Comparison

Intersection	2040 Curved Alignment Build		2040 Direct Alignment Build		2040 Curved Alignment Build - TSP		2040 Direct Alignment Build - TSP		2040 Direct Alignment Build - TSP	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
Knox Avenue and Best Buy Parking Ramp	4	A	4	A	4	A	4	A	4	A
Knox Avenue and Dicks Sporting Goods / PnR	3	A	4	A	3	A	4	A	4	A
Knox Avenue and Southeast Parking Lot	3	A	3	A	3	A	3	A	3	A
American Boulevard West and Knox Avenue	11	B	11	B	12	B	12	B	11	B

Table 12. Knox Avenue Connection – PM Alternative Comparison

Intersection	2040 Curved Alignment Build		2040 Direct Alignment Build		2040 Curved Alignment Build - TSP		2040 Direct Alignment Build - TSP		2040 Direct Alignment Build S Station - TSP	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
Knox Avenue and Best Buy Parking Ramp	80	F	77	F	78	F	74	F	77	F
Knox Avenue and Dicks Sporting Goods / PnR	8	A	8	A	8	A	8	A	8	A
Knox Avenue and Southeast Parking Lot	2	A	2	A	2	A	2	A	2	A
American Boulevard West and Knox Avenue	24	C	24	C	24	C	25	C	25	C

The results of the comparison indicate that both alternatives are expected to operate comparably. The difference in delay at the four selected intersections is negligible (<2 seconds) and the LOSs are the same between the two alternatives. However, the route along Knox Avenue in the Direct Alignment is shorter than the Curved Alignment; therefore, the travel time for the Direct Alignment would be shorter. There would be a 5 to 30 second reduction in travel time with the Direct Alignment compared to the Curved Alignment.

Southbound BRT Station Location at American Boulevard

There are two possible locations for the southbound BRT station at the Knox Avenue/American Boulevard intersection, near-side (north of American Boulevard) and far-side (south of American Boulevard). All of the results shown above were determined with a near-side stop. The comparison was made assuming the Direct Alignment and TSP would be implemented at the Knox Avenue/American Boulevard intersection. The results of the comparison are shown in Tables 13 and 14.

Table 13. Near-Side vs. Far-Side Comparison – AM Alternative Comparison

Intersection	2040 Near-Side Stop		2040 Far-Side Stop	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
Knox Avenue South and Best Buy Parking Ramp	4	A	4	A
Knox Avenue South and Dicks Sporting Goods / Park & Ride	4	A	4	A
Knox Avenue South and Southeast Parking Lot	3	A	3	A
American Boulevard West and Knox Avenue South	12	B	11	B

Table 14. Near-Side vs. Far-Side Comparison – PM Alternative Comparison

Intersection	2040 Near-Side Stop		2040 Far-Side Stop	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
Knox Avenue South and Best Buy Parking Ramp	74	F	77	F
Knox Avenue South and Dicks Sporting Goods / Park & Ride	8	A	8	A
Knox Avenue South and Southeast Parking Lot	2	A	2	A
American Boulevard West and Knox Avenue South	25	C	25	C

The results of the comparison indicate that two alternatives operate comparably and the difference in delay at the four comparison intersections is less than five seconds per vehicle. Safety and design considerations should be the deciding factors in station location and not operations since they provide similar operations.

98th Street Stations

The results of the operations analysis for the 98th Street Stations are shown in Tables 15 and 16.

The results of the operations analysis indicate that all study intersections along 98th and 99th Street are currently operating acceptably, with LOS C or better in the a.m. and p.m. peak hours. All the study intersections are expected to continue to operate acceptably in year 2019 and year 2040, both with and without the implementation of the Orange Line BRT. The increase in delay in the build scenarios is negligible (<5 seconds) and the LOS is still D or better, which is considered acceptable. No major degradations in intersection approach queues are expected with the implementation of the Orange Line BRT.

The results also indicate that TSP can be implemented at the 98th Avenue/I-35W Southbound Ramp and 98th Avenue/I-35W Northbound Ramp intersections in these two areas without significantly impacting general purpose traffic.

Nicollet Avenue and Burnsville Parkway Stations

The results of the operations analysis for the Nicollet Avenue and Burnsville Stations are shown in Tables 17 and 18.

Burnsville Parkway and Pleasant Avenue	8	A	9	A	8	A	9	A	9	A	9	A	9	A

The results of the operations analysis indicate that all study intersections along Nicollet Avenue and Burnsville Parkway are currently operating acceptably, with LOS D or better in the a.m. and p.m. peak hours. All study intersections are expected to continue to operate acceptably in year 2019, both with and without the implementation of the Orange Line BRT. By year 2040, Nicollet Avenue/Highway

13, Nicollet Avenue/Travelers Trail, and Burnsville Parkway/Gateway Boulevard intersections expected to be near failing in the a.m. peak hour without the implementation of the Orange Line BRT due to background growth. These three intersections are expected to operate at LOS E in the a.m. peak hour, and the Nicollet Avenue/Highway 13 intersection is also expected to operate at LOS E in the p.m. peak hour. The analysis indicates that cycle failure is expected to occur on multiple approaches at the Nicollet Avenue/Highway 13 intersection regardless of if the Orange Line BRT is implemented or not. The implementation of the Orange Line BRT is not expected to have a significant impact to these near failing intersections, with the change in delay less than five seconds per vehicle. No major degradations in intersection approach queues are expected with the implementation of the Orange Line BRT.

To reduce the impact of congestion at the Nicollet Avenue/Highway 13 intersection on the Orange Line BRT, it is recommended to implement a bus-only shoulder on the eastbound approach. This will reduce the delay for the Orange Line BRT at this intersection. Furthermore, the end of the proposed southbound Orange Line BRT route is at the Nicollet Avenue station. As such, to reduce the travel time for passengers on the southbound Orange Line BRT wishing to alight at the Burnsville Avenue station, the northbound Orange Line BRT should not depart the Nicollet Avenue station until the next BRT bus arrives. This will allow passengers to transfer buses and arrive to the Burnsville Station quicker.

The results also indicate that TSP can be implemented at the Burnsville Parkway/I-35W Northbound Ramp intersection without significantly impacting general purpose traffic.

Transit Signal Priority Evaluation

The results shown previously in this memorandum indicate that TSP can be implemented at the nine identified intersections without having a significant negative impact to general purpose traffic. To further understand the benefits of TSP for the Orange Line BRT, a comparison of delay for the BRT with and without TSP was completed. The comparison evaluated the delay for the specific movements that would benefit from the implementation of TSP. The results of the comparison are shown in Table 19.

Table 19. TSP Evaluation

Intersection	Movement	2019 AM Build	2019 AM Build-TSP	2019 AM TSP Delay Reduction (sec/BRT)	2040 AM Build	2040 AM Build-TSP	2040 AM TSP Delay Reduction (sec/BRT)

West 82nd Street and Knox Avenue South	SBL	47 (59)	7 (24)	40 (35)	38 (61)	6 (26)	32 (35)
West 82nd Street and I-35W NB Ramps	NBL	37 (28)	13 (11)	24 (17)	38 (27)	17 (12)	21 (15)
West 98th Street and Dupont Avenue South	SBL	60 (50)	24 (23)	36 (27)	60 (48)	31 (25)	29 (23)
West 98th Street and I-35W NB Ramps	NBT	111 (79)	26 (51)	85 (28)	108 (77)	27 (53)	81 (24)
West 98th Street and I-35W NB Ramps	NBL	40 (40)	24 (33)	16 (7)	29 (43)	22 (31)	7 (12)
Burnsville Parkway and I-35W NB Ramps	SBT	76 (91)	24 (23)	52 (68)	75 (88)	23 (26)	52 (62)

The results of the TSP comparison indicate that the implementation of TSP at these nine intersections would provide a significant travel time savings for the BRT. TSP would be particularly beneficial for BRT buses that are behind schedule to help them get back on schedule. The intersections where the BRT is on the minor approach would recognize the greatest benefit from TSP since there is more slack time available for these buses to take advantage of compared to buses on the major approach.

These results assume that every Orange Line BRT bus would get TSP. The decision may be made to only give TSP to buses that are a certain time behind schedule using automatic vehicle location (AVL), so reduction in delay for all BRT buses would be less than what is shown.

Conclusions

A traffic impact study was completed to assess the potential impacts on general purpose traffic and parking at key arterial intersections with the implementation of the Orange Line BRT. Key arterial intersections were identified around the BRT station locations and grouped together based on the jurisdictional review agencies and connectivity of the intersections. The existing 46th Street Station and the proposed Lake Street Station were excluded from this analysis since the 46th Street Station does not impact arterial intersections and the Lake Street Station impacts are being documented under a separate project.

The results of the traffic impact study indicate that the Orange Line BRT can be implemented without having a significant negative impact to general purpose traffic. The following conclusions are provided:

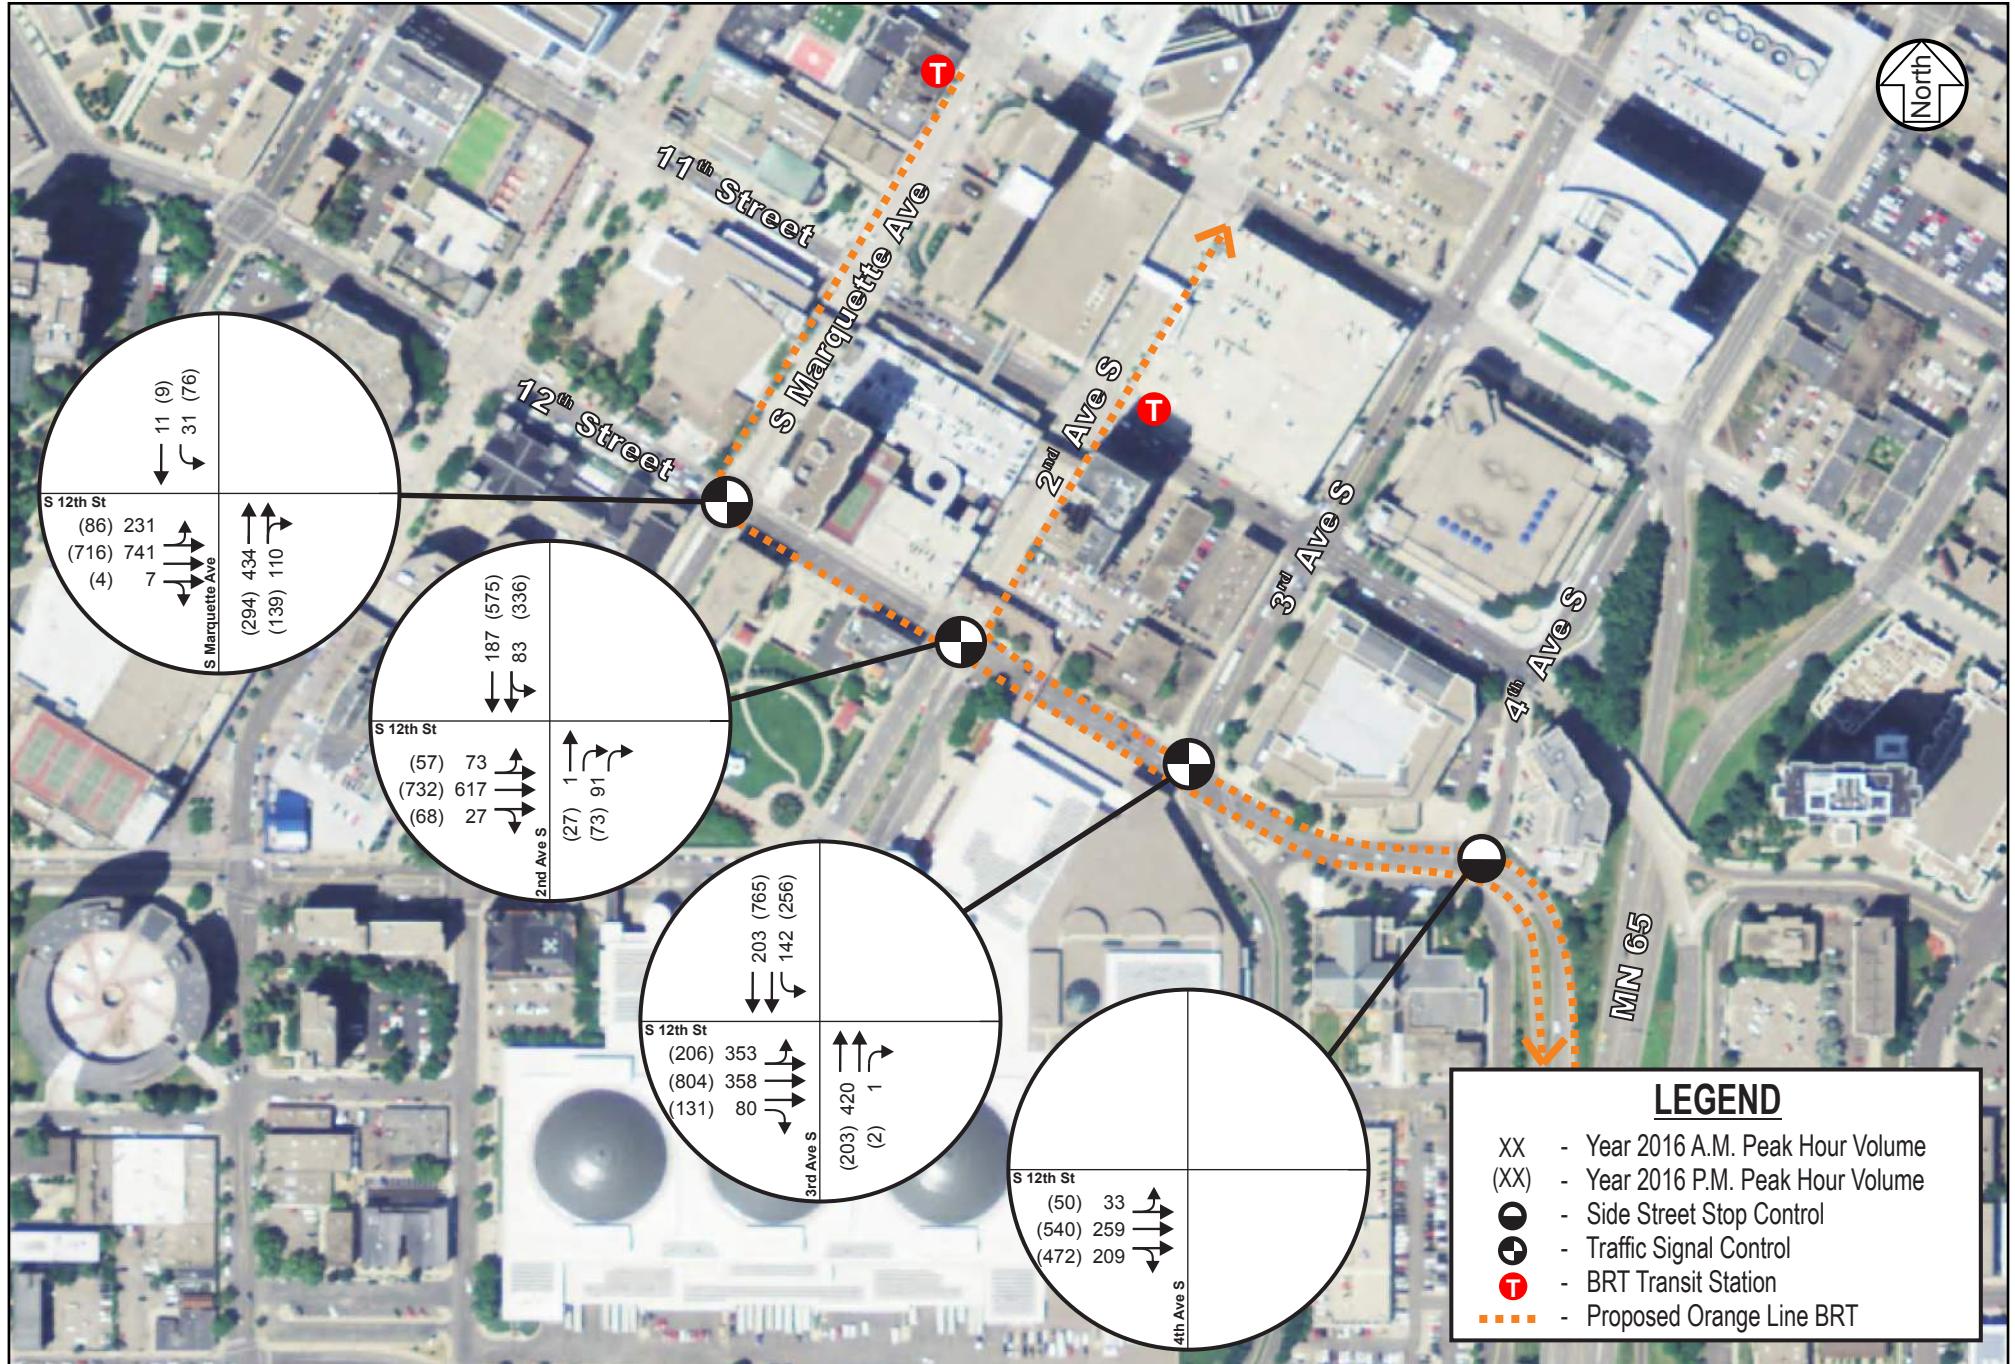

- The implementation of the Orange Line BRT is not expected to have any major impacts to general purpose traffic at the analysis intersections. No major degradations in intersection approach queues are expected with the implementation of the Orange Line BRT.
 - All study intersections currently operate at an acceptable overall LOS D or better in the a.m. and p.m. peak hours with existing geometrics and traffic control.
 - The existing intersections have adequate capacity to accommodate year 2019 and year 2040 forecast volumes, along with the increased bus service with the implementation of the Orange Line BRT.
 - Increasing development in the American Boulevard and Knox Avenue areas may lead to unacceptable future operations based on overall average delay per vehicle at two unsignalized intersections. These impacts are caused by increased vehicular traffic due to general traffic background growth on Knox Avenue and not as a result of the implementation of the Orange Line BRT.
 - A recommended improvement is at the 66th Street/I-35W Southbound Ramp intersection. The southbound approach should be restriped to a shared left-turn/through lane and separate right-turn lane to better balance lane utilization, provide better ramp alignment with the far-side station, and to minimize BRT delay. This mitigation does not cause additional impacts to general purpose traffic and is included as part of the Orange Line BRT project.
- The 12th Street Transit Ramp connection will provide a direct connection to the arterial network for BRT along with existing transit routes from future freeway bus lanes thereby reducing delay for buses caused by weaving conditions.
- With the addition of a westbound bus-only lane along 12th Street between I-35W and 2nd Avenue, the removal of 15 parking spaces on the north side of 12th Street is necessary. This improvement will decrease the number of eastbound lanes from three to two, but will cause minimum increases in average delay per vehicle (less than two seconds of delay per vehicle) along 12th Street.
- The Direct Alignment alternative for the Knox Avenue areas provides a better transit advantage compared to the Curved Alignment connection for the Knox Avenue connection under I-494 by decreasing the Orange Line BRT's travel time between the 76th Street and American Boulevard Stations.
- Analysis of the Orange Line BRT southbound station location at the Knox Avenue/American Boulevard intersection showed there is expected to be minimal operational differences between the near-side and far-side station locations at American Boulevard. Additional safety and design considerations are needed for a recommendation,

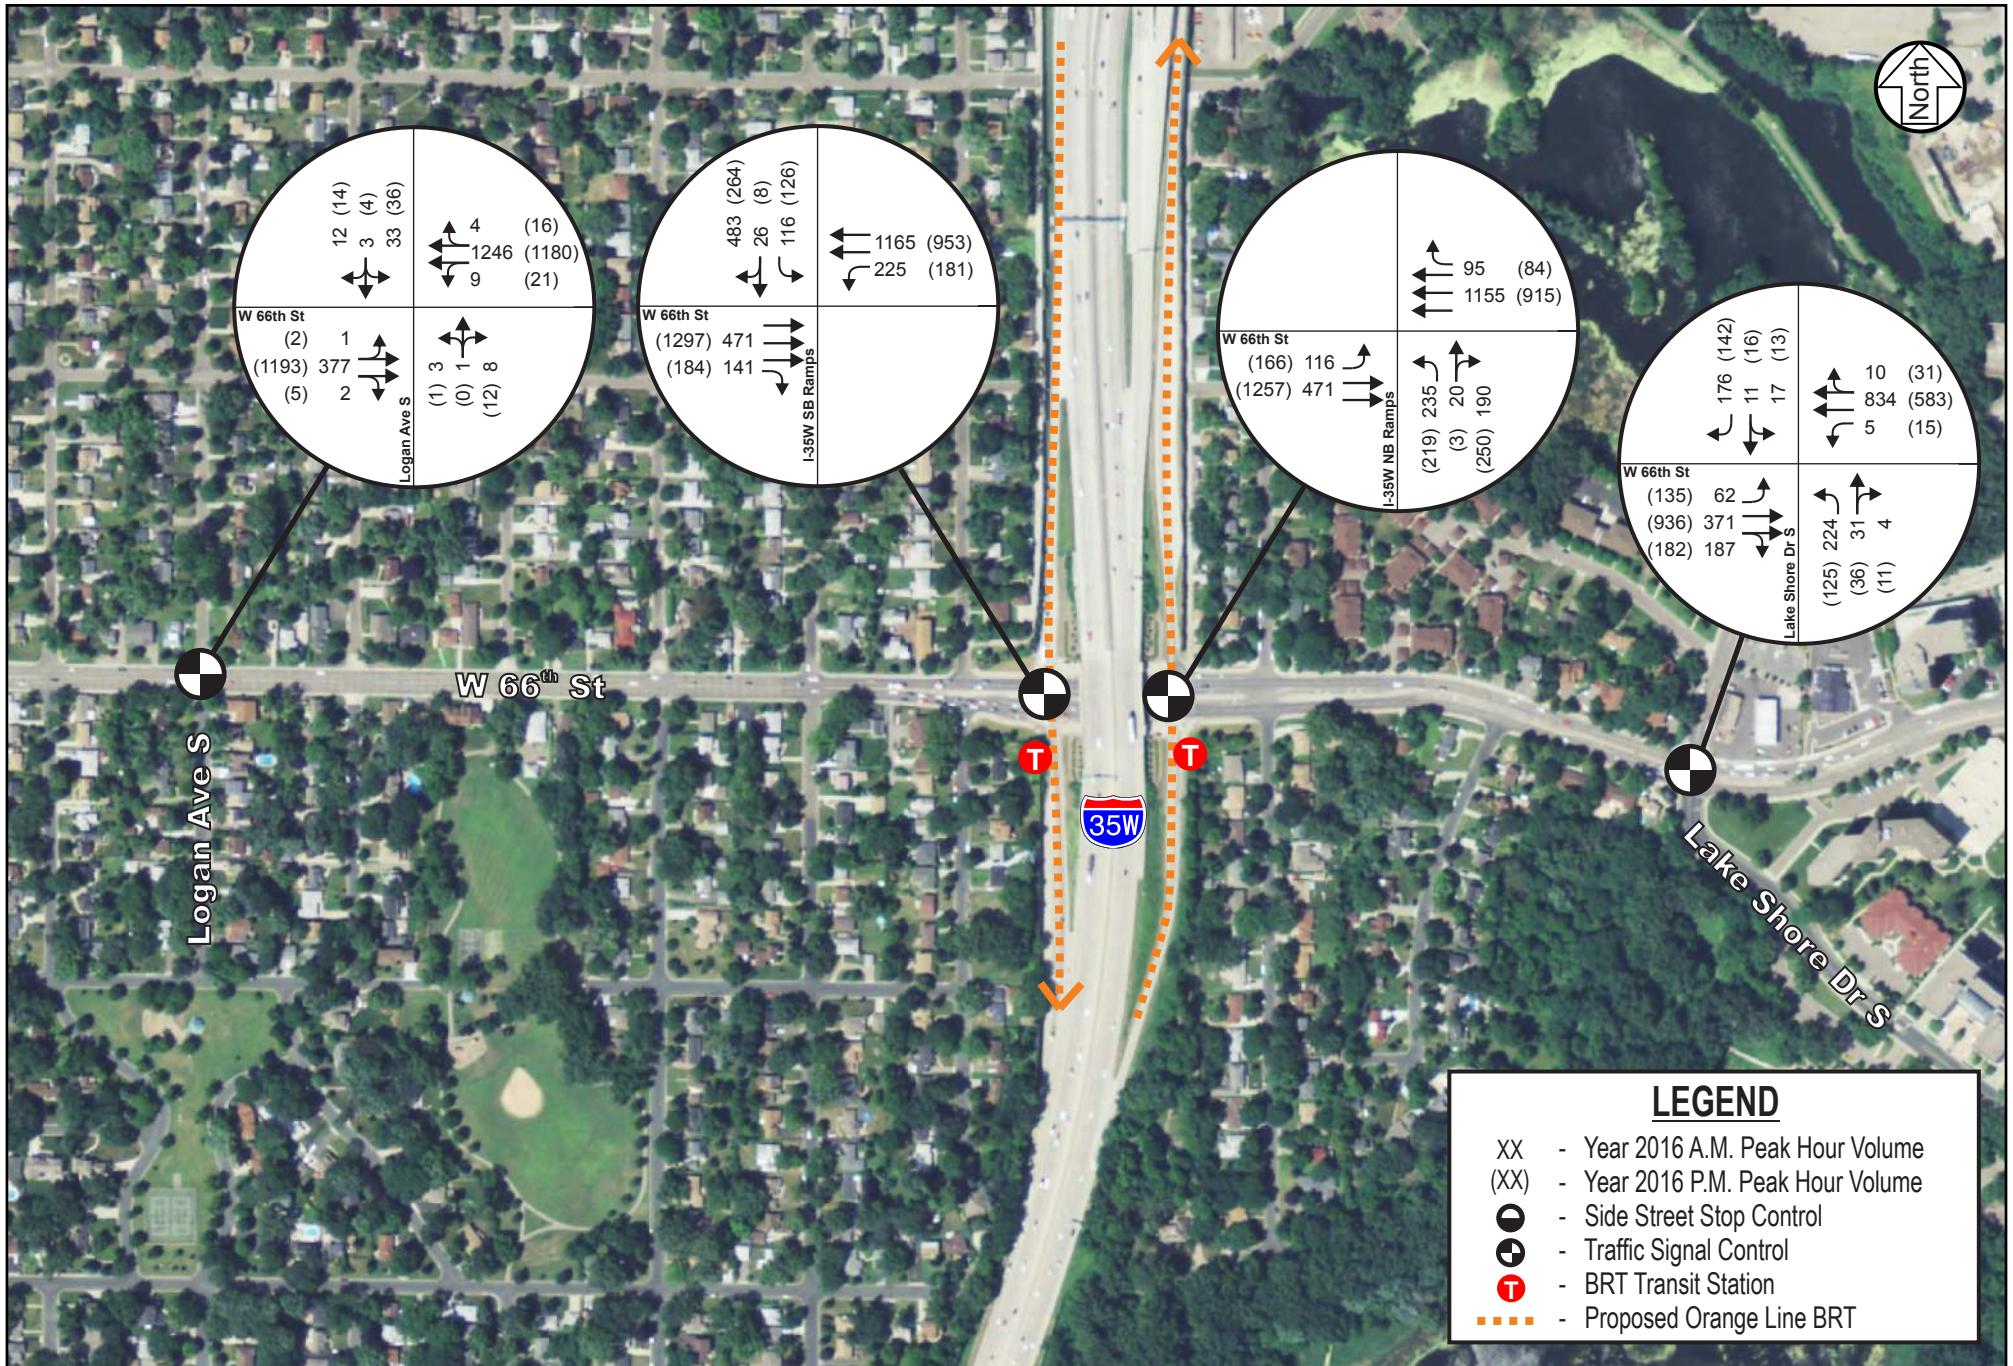

which will be vetted through the design development process. Impacts to general purpose traffic are minimal regardless of the station location.

- A bus-only shoulder is recommended for eastbound Highway 13 between I-35W and Nicollet Avenue to bypass queuing that is expected from the Highway 13 and Nicollet Avenue intersection.
- TSP is expected to provide a significant benefit for the BRT, particularly at the intersections where the BRT is on the minor approach. With the implementation of TSP, BRT travel times can be decreased by 5 to 7 minutes along the entire corridor. Allowing the BRT to use TSP is expected to cause a minimal increase in total intersection delay, but will still preserve acceptable levels of service.
 - 66th Street/I-35W Southbound Ramp – Southbound through
 - 66th Street/I-35W Northbound Ramp – Northbound through
 - 76th Street/I-35W Northbound Ramp – Eastbound left-turn
 - American Boulevard/Knox Avenue – Northbound/Southbound through
 - 82nd Street/Knox Avenue – Southbound left-turn
 - 82nd Street/I-35W Northbound Ramp – Northbound left-turn
 - 98th Street/I-35W Southbound Ramp – Southbound left-turn
 - 98th Street/I-35W Northbound Ramp – Northbound through/left-turn
 - Burnsville Parkway/I-35W NB Ramp – Southbound through.
